

Logic Communications has announced that beginning in the first quarter of 2009, two new products will be added to its' existing portfolio. High Definition video conferencing from Tandberg and BlackBerrys' line of products and server solutions. "We feel these two products allow us to continue to offer state-of-the- art technologies to our clients that can integrate into our existing portfolio producing power house solutions that are extremely varied and extensive " a spokesperson for Logic Communications stated.

TANDBERG

Building a video community significantly improves collaboration. Everyone understands the direction, and feels part of the same team. In short, it has the power to unify the organization_Tandberg has been

a world leader and visionary in the development of video communications since 1989. They have the broadest range of end points in the industry along with absolute high definition quality. Imagine your workspace simplified with just a PC, a mobile phone and video. Through seamless switching callers reach you, not your device. Communication is face-to-face and natural, with video set as your preferred selection. This very human approach to communication is already possible through TANDBERG technologies and its partnerships with companies like HP and Microsoft.

BLACKBERRY

The BlackBerry was first introduced in 1999 as a two-way pager and was developed by Research In Motion (RIM). Currently Over 21 million people use BlackBerry® smartphones on over 375 wireless networks in 140 countries around the world.

Thousands of companies and government organizations worldwide have increased their success with BlackBerry® solutions. The BlackBerry solution gives mobile users access to email, phone, data, applications, games and the Internet from a smartphone. The solution can be customized to meet the needs of one person or an entire enterprise, to any scale, in any industry.
