

HP DSS

HP Digital Sending Software (DSS) streamlines critical business document handling and integrates with existing IT infrastructures to maximize return, mitigate risk and improve performance. HP DSS 4.0 is the entry-level member of a family of server-based software products that enables paper documents to be incorporated into electronic business processes at the touch of a button. From supported HP digital sending devices, digitized information can be sent quickly and securely to network folders, printers and fax services, improving productivity and reducing the costs of sharing and storing information.

How HP DSS 4.0 works

HP DSS software leverages existing IT infrastructure—network authentication, e-mail addresses and fax services—for an increased return on IT investments. The LDAP (Lightweight Directory Access Protocol) support enhances the embedded send to e-mail capability of HP multifunction and stand-alone digital sending devices, allowing access to company directory information such as e-mail addresses and distribution lists. This information is constantly updated and allows users to auto complete e-mail addresses at the device. Administrators can ensure documents get indexed and sent to network folders accurately by using the custom keys on HP multifunction and stand-alone digital sending devices. The administrator creates questions that appear on the device's touch-screen control panel. These questions prompt the sender to easily select the correct indexing information before the document is scanned, reducing the risk of losing critical documents.

Benefits

- Saves money and reduces overhead by incorporating paper documents into electronic infrastructures
- Provides simple conversion of documents into searchable text files in popular formats
- Enhances and simplifies intelligent troubleshooting with detailed event records
- Helps ensure security of digital data with user verification support and routing controls

Applications

- Health care: HIPAA compliance, patient records, medication documentation
- Legal industry: Bates module, upload into Summation and Concordance
- Finance: distributed capture, brokerage applications, loan applications
- Insurance: distributed capture, accident reports, damage claims
- Education: tests, surveys, applications
- Government forms: birth certificates, DMV forms, tax forms

Improve core business processes. Send and archive paper documents quickly and securely with HP DSS 4.0.

Special features

- ReadIRIS Optical Character Recognition (OCR) converts documents from image files to searchable text files in popular formats, including searchable PDF, Microsoft® Word, .TXT files and HTML.
- Utilizes existing LDAP or NTLM, Novell, or Kerberos network security to verify user identity.
- LOG file provides event records similar to Windows® event-log tracking. Administrators receive e-mail alerts for user and system generated errors.
- Confirms indexing data is entered correctly before documents are scanned.
- DSS security features allow device hard drive to be wiped clean after transmission.

Technical specifications

- Server OS requirements:
Windows 2000 Professional (Server or Advanced) or Windows XP Professional, Windows 2003 Standard Server or Enterprise Server2
- Pentium III or higher computer
- 256 MB of RAM (512 MB if generating OCR output)
- 200 MB of hard disk space
- CD-ROM drive
- Fast Ethernet 100 Base-TX, Ethernet 10Base-T, or 10Base-2 (BNC)
- Novell support requirements:
Novell NetWare version 3.12, 3.2, 4.11, 4.2, or 5 running on the Novell NetWare server;
Novell NetWare Client version 4.6 (or later) installed on the Windows computer that runs the HP DSS 4.0 software
