Produce Complex Documents Faster and More Efficiently

In today's competitive landscape, businesses face the constant challenge of producing high volumes of documents with complex workflow and requirements in a short time. MicroPress 7.5 helps mid-to-high-volume print-on-demand environments maximize their current equipment investment by providing a fast, high-performance raster-based digital document production system that produces complex, short-run, color and black and white documents. The solution comes with an intuitive graphic user interface, an industry-leading architecture, late stage editing tools, workflow automation and features that boost productivity for crunch times.

Get Cutting-Edge Productivity

MicroPress' Production, Professional and Prodigy servers maximize productivity in demanding production environments. The solution's make-ready tools also optimize job throughput and produce unmatched quality. In addition, the flexible, scalable design provides a growth path to meet future requirements, and allows RIPs and software to be easily added.

Extend Solutions' Color Functionality

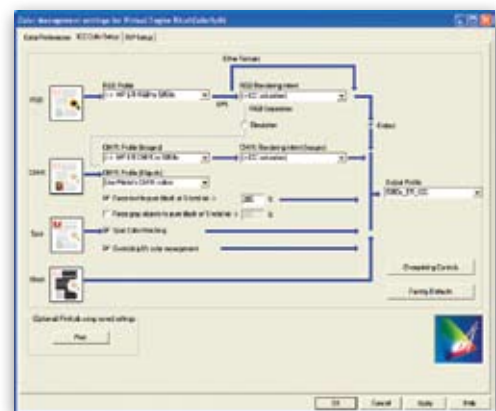

MicroPress' TrueColor extends users' color functionality through several features. Image Editing provides an intuitive way to adjust colors fast with its on-screen feedback. Gammatic calibrates single, multiple and clustered devices to a universal standard for consistent color output, while ConTune ensures that documents are printed across multiple engines appear identical.

For accurate, high-quality color, TrueColor's color management graphic user interface gives users complete control by allowing them to select ICC profiles and rendering intent per image type. Its ICC Profile Processor saves users time by automatically recognizing RGB, CMYK, LAB and spot colors and intelligently maps them to the correct CMYK values for each print engine. The solution's newest feature, EFI Spot On with Substitute Colors, accurately reproduce named colors on printers for perfect logos, letterheads and more, ensuring accurate corporate colors every time.

MicroPress offers TrueCurves for universal curve creation, making the process quick and easy with mouse-drag functionality and anchor points for sophisticated fine-tuning. It also offers multiple proofing emulations per printer, allowing a single engine to produce various proofing emulations by selecting printer queues with different color setups.

Color Editing generates exceptional print output

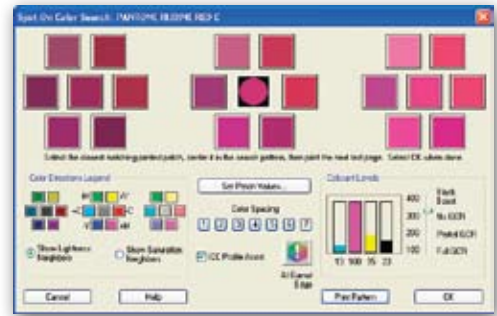

ICC Color Set Up produces accurate and consistent color

Use Expert Tools to Speed up your Digital Prepress Work

In the print-on-demand world, last-minute changes are inevitable. MicroPress offers several prepress tools to get the job done. Its interface increases operator efficiency by offering device features in a consistent format that improves productivity and reduces the learning curve associated on new and different engines.

For greater productivity, TruePrint drives each device at its maximum speed, regardless of page complexity or volume. TrueRecover increases engine performance by automatically providing page and job level error detection and recovery across one or multiple devices. In addition, TrueCluster increases engine output by printing multiple and large jobs simultaneously and quickly, while PowerRIP maximizes throughput by allowing simultaneous processing of multiple files, eliminating bottlenecks.

EFI Spot On optimizes printing of named colors

Harness Make-Ready Tools to Streamline Workflow

MicroPress' TrueEdit dramatically streamlines workflow by automating manual processes such as hand collating, tab inserting, document renumbering and booklet creating. Its make-ready tool suite also enables operators to prepare documents that have already been RIPped for printing.

For advanced tab functions, Tab Editor allows users to edit and update tabs, while Tab Builder speeds up the document production process by making it quick and easy to create tab pages and to place text on tabs.

MicroPress' Layout Modes allows the operator to quickly view document layout for easy page level settings and tab insertion, saving precious time. In addition, the Page-Level Media Selection feature allows users to select media from page properties for individual pages, page ranges or selected criteria such as paper size and media type. Micropress also offers powerful media catalog with WYSIWYG editing views with page and chapter level control.

Benefit from Advanced Job Management Capabilities

MicroPress' advanced job management features provide complete engine control to optimize any workflow with tools such as TrueScript, which automates frequently performed tasks.

For fast learning, the newly designed PrintStation Manager comes with an intuitive graphic user interface that increases productivity, while decreasing the learning curve.

For exporting and managing media entries using familiar terminology, there's Media Catalog, which also provides seamless integration to EFI Digital StoreFront™. In addition, MicroPress comes with the Color and Black & White Split feature to automatically direct pages to the appropriate devices, eliminating need for manual collation and reducing costs.
