

Recycled Content:

Tackable Acoustical Tile

Material:	% by weight, Recycled Content		End of Life Mgmt.
Steel	79%	30% Post-Consumer	Recycle
Fabric	8%	Up to 100% Post-Consumer	Recycle where possible
Polyester Wool (PET)	11%	100% Post-Consumer	Recycle
Misc.	2%	N/A	
Corrugated Packaging	N/A	74% Average	Recycle

Inputting for LEED Certification

- Recycled Content
- 30% Post-Consumer
- RC Value of .42³

Indoor Air Emissions

MAiSPACE meets the requirements, for Maximum Formaldehyde air emissions, of the following organizations:

- Occupational Safety and Health Administration (OSHA)
- World Health Organization (WHO)

Elimination of Fiberglass:

Replacement material made from 100% recycled plastic from soda bottles.

The ill effects of fiberglass inhalation have been documented in studies dating as far back as 1970, but because of backlash from the fiberglass manufacturing industry, regulations regarding its use in the workplace have been slow to develop. Despite this absence of standards, MAiSPACE, a leading manufacturer of quality office furniture systems, is proud to announce it will no longer utilize fiberglass in the production of its tackable and acoustical panels. Instead, the company will use post-consumer PET, a material composed of 100% recycled plastic soda bottles.

*MAiSPACE complies with the Federal Trade Commission's Part 260 Guide for the fair use of Environmental Marketing Claims. Product recyclability depends on local recycling programs.
